## Event Speakers

**Jaime Zapata, CIC, LSSGB**  
Senior Quality Improvement  
Facilitator and Infection  
Prevention Specialist, Telligen

**Rosie Bartel**  
Patient Coordinator, University  
of Wisconsin School of  
Medicine Infectious Disease  
Department  
Member, Aging Initiative  
Patient and Caregiver Advisory  
Council  
Educator, Patient and Family  
Engagement

Join us for part three of the Preventing Healthcare-Associated Infections (HAIs) Learning & Action Network Series. Over the last two years, progress toward eliminating HAIs has been impacted by the COVID-19 pandemic. Multi-Drug Resistant Organisms (MDROs) remain a significant risk to patient safety. According to the Centers for Disease Control and Prevention (CDC), on any given day, about 1 in 31 hospital patients has an HAI.

This dynamic webinar will share strategies for getting “back to basics” when it comes to preventing MDROs, particularly hospital onset *C. difficile* and Methicillin-Resistant Staphylococcus Aureus (MRSA) bacteremia. Additionally, we will discuss methods for integrating the patient voice into infection prevention.

## Learning Objectives:

1. Identify and prioritize at least two key MDRO related infection prevention processes to hardwire and maintain in the event of another public health emergency or COVID-19 surge.
2. Establish or augment a plan to routinely track and report MDRO infections in your facility.
3. Develop a plan to routinely educate staff, patients and families on hospital infection prevention basics.
4. Identify ways to integrate the patient voice into infection prevention improvement plans.

## Who Should Attend:

- Nurses, Physicians, Infection Preventionists, Front-line Staff, Quality and Patient Safety Professionals, Clinical and Hospital Leaders, Patient and Family Engagement Advocates
